About Myself

I'm a software developer with 13 years of commercial experience. I live in the Blue Mountains west of Sydney, so I'm mainly interested in remote opportunities.

My expertise is in functional programming, service-oriented cloud architectures, scalable data pipelines and data-engineering, and web development.

I spent most of 2020 working on my own startup in the digital identity space, which was an amazing experience, but made much harder by trying to do it during a global pandemic.

I'm passionate about the environment, privacy, civil liberties, and education. I'd ideally like to work for a company that's having a positive impact on the world.

For my next role I'm looking for something where I can step up and take on more responsibility. In particular, a role where I can work across both software development and product management would be ideal.

At university I focused on large scale parallel and distributed systems; various machine learning, data mining and AI techniques; and a healthy dose of pure theory and mathematics.

Skills

Programming	Rust • Haskell • Scala • JavaScript • Python • SQL
Document / Data Formats	HTML & CSS • XML • Avro • JSON • Delta
Databases	PostgreSQL • Kafka • ElasticSearch • DynamoDB • S3
Libraries & Frameworks	React • Spark • NodeJS • Smithy
Cloud Platforms	AWS • GCP • DataBricks
Operating Systems	Linux • MacOS
Tools & Software	VSCode • JetBrains IDEs • Git • Terraform • Docker • Nix • Lambda • Claude
Soft Skills	Agile • Product Management • Mentoring • Kanban • Scrum

Experience

Corro

Remote, Australia

Senior Software Engineer, Acting Product Manager

December 2025 - Present

At Corro I work as a backend engineer, writing Rust to create the first version of the company's product - a single-pane-of-glass communication platform.

My main task has been building out the messaging software which forms the core of the platform. This has required me to distill a complex set of business goals and requirements into an implementable design, and then lead the technical work to achieve that design.

Business goals around auditability, low-trust communications and a multi-master federated architecture have necessitated a complex data model and communication protocol, which I have successfully designed and delivered.

Recently, I have also been acting as the technical product manager for the engineering team, as the company builds towards a product milestone to take to investors and customers. This has required me to work broadly across the business, gathering and defining requirements, scoping and organising work, and coordinate closely with our design and UX team to ensure there is a smooth pipeline of work for the development team in order to achieve a tight deadline.

Rust | DynamoDB | Smithy | AWS | Lambda | Nix | CDK | Startup | React | TypeScript

Seek

Sydney, Australia

Senior Software Engineer

August 2022 - November 2025

At Seek I worked on the 'Candidate Quality' team, where I productionised AI and LLM models that help hirers find candidates that are a strong fit for their roles, and help candidates find jobs that are a good fit for them.

This work was a combination of building and maintaining low-latency data pipelines; building out scalable and cost-efficient APIs to serve models and enable product features; organising and storing data for analytics, training, and live inference; and collaborating with product managers and data scientists to bring new models and features to production.

My work there included reducing my team's AWS costs by 40%, and shifting a large section of our processing pipelines off of AWS Lambda onto Spark, Kafka, and DataBricks.

I also gradually modernised parts of my team's tech stack, including migrating from Serverless to Terraform for infrastructure management, and introducing Nix to our workflow to enable reproducible development environments.

I also worked on a new "High-Fit" project, using AI to highlight and explain why particular candidates are a good fit for a role, in a human-understandable way.

Python · Scala · JavaScript · AWS · Spark · Kafka · Databricks · LLMs · AI · MLOps · Terraform · Data Engineering · Nix

---

Voly

Sydney, Australia

Staff Software Engineer

October 2021 - June 2022

At Voly I worked as a senior - and later staff - software engineer on the backend team. My role encompassed the full stack from the web front-end, to the backend, server administration, cloud infrastructure, databases and security.

I was responsible for maintaining and building upon the initial go-to-market MVP software that the company had procured - written in TypeScript using NestJS and GraphQL, and using Shopify as a backend for most of the ecommerce aspects.

I was also responsible for facilitating a company wide consultation and requirements gathering process to define the scope of a replacement backend system that was fit for purpose for the company's mid and long term growth and product goals.

My team had begun work implementing this new backend, using Haskell, Postgres and Hasura (a Postgres-to-GraphQL API layer), as well as Terraform for managing infrastructure on Google Cloud. Unfortunately, due to the global downturn, my role was impacted by a round of layoffs so we were not able to complete this work.

On the softer-skill side, I also had a lot of fun mentoring some junior and mid-level frontend developers, and bringing my team up to speed working in an agile Kanban system.

TypeScript · Haskell · GraphQL · Postgres · Hasura · NestJS · Terraform · Google Cloud · Shopify

---

Prezzee

Sydney, Australia

Senior Software Engineer

March 2021 - September 2021

At Prezzee, I was responsible for integrating the company's chosen CMS (Kentico Kontent) into their website and their app's web front-end, in order to enable non-technical employees to manage content.

I was also responsible for creating a large chunk of their web UI component library, and integrating that into the website and app as part of a site redesign that was happening at the same time as the CMS was being rolled out.

As a part of that work, I helped onboard and upskill several junior and mid-level engineers onto the project, and was in practice running the dev team a lot the time as the lead / head-of-frontend was often busy with other work.

I also introduced several new agile practices that resulted in my team being one of the most consistent and accurately performing (in terms of estimates vs reality) teams in the company.

ReScript · React · Next.js · HTML & CSS · Kentico Kontent · Terraform · Agile · Functional Programming

---

1Self

Sydney, Australia

Co-Founder

February 2020 - February 2021

As a co-founder I worked across all functions of the business, with a particular focus on software development, product management, and legal and compliance issues. On the back-burner for the forseeable future, as I became a parent instead.

JavaScript · React · AWS · Terraform · Product Management · Agile · Startups

---

Netscout (formerly Arbor Networks)

Sydney, Australia

Software Engineer

January 2017 - January 2020

At Netscout I worked as part of an agile team to deliver scalable data processing pipelines that power a suite of analytics tools and services which are used by both their customers, and their sales and support teams.

My team and I were responsible for almost all aspects of these pipelines, including development, deployment, monitoring, end-to-end-testing, and working with our product and delivery management team to clarify goals and scope work.

I primarily worked in Haskell for development, with some forays into Scala (legacy pipelines), Ruby & Terraform (deployment & infrastructure tooling), Python (ML code, scripting), and even occasional bits of C and JavaScript.

I learned an incredible amount, especially about what it takes to develop and deploy stable, scalable, and maintainable solutions. I also greatly enjoyed some of my secondary duties, which included leading internal workshops on Haskell and functional programming, as well as mentoring interns in some fundamental computer-science concepts.

Haskell · Scala · Python · Terraform · AWS · Agile · Data Engineering · Functional Programming

General Dynamics Mediaware
Software Engineer
Canberra, Australia
October 2015 - December 2016

At Mediaware I worked in an agile team to deliver mission critical video processing software to our broadcast customers around the globe.

My main responsibility was leading the development and design of the web-based user interfaces to our core products

Python · JavaScript · HTML & CSS · C · Agile · Web Development

---

Welcomer
Software Engineer
Canberra, Australia
October 2014 - July 2015

Australian National University
Tutor (Part Time)
Canberra, Australia
February 2012 - June 2015

Oxide Interactive
Junior Web Developer
Canberra, Australia
January 2010 - September 2010

Zoo Advertising
Web Developer (Contractor)
Canberra, Australia
March 2009 - September 2009

The Stavridis Group
Junior Web Developer
Canberra, Australia
November 2008 - February 2009

Education

Australian National University
Bachelor of Computer Science (Honours) - First Class Honours
Canberra, Australia
2009 - 2014

The Bachelor of Computer Science (Honours) is a four year undergraduate degree. The degree is a research-focused professional program for exceptional students who have an interest in undertaking research in an industry or academic environment. It is expected that students will graduate with First Class Honours.

Bachelor of Computer Science (Honours) students are expected to maintain a superior distinction average in order to remain in the degree.

General Assembly
Product Management - 1 Week Intensive
Sydney, Australia
2019

A one week intensive course on product management, covering topics such as the product lifecycle, hypothesis validation, customer interviews, personas, feature prioritisation, competitor research, minimum viable products, product roadmaps, metrics, sketching, wireframes, usability testing, and agile.

Community Involvement

International Conference on Functional Programming
Attendee
Berlin, Germany
2019

Lambda Jam
Attendee, Speaker (2018)
Sydney, Australia
2017, 2018, 2019, 2021, 2022

PyConAU
Attendee
Melbourne, Australia
2016

Functional Programming Meetup
Group Member
Canberra & Sydney, Australia
2016 - 2022

Lean Beer Meetup
Founding Member
Canberra & Sydney, Australia
2016 - 2022

Presentations

Lambda Jam
The Human Side of Haskell
Sydney, Australia
2018
